SUBJECT:	**External Point of Presence (POP) Decommission**
DATE:	May 24th, 2017

Point of Presence (POP) for MX Connectivity

As we continue to optimize our infrastructure and streamline our business processes, we will be making changes to our existing POPs in Secaucus (NY2), London (LD5) and Chicago (CH1).

We will be decommissioning our Hosting services at each of the locations mentioned above in January, 2018. As an alternative, connectivity via existing extranet providers who already have a point of presence in each of the locations will be maintained.

What does this mean?

Only those customers who utilize the POPs in NY2, LD5 and CH1 will be impacted. Access to our primary and backup data centers in Markham and Toronto respectively will not change.

From a network perspective, you will be able to access our primary data center through one of our certified extranet providers or through a Service Bureau vendor. A complete list can be found on our corporate website here (see pg.10).

From an applications perspective, no changes will be required with respect to the feed messages or order execution services via FIX or SAIL.

Next Steps

TMX will be working with existing customers over the next 1-2 months to establish a detailed migration plan. Our goal is to make this transition as seamless as possible and allow the participant the flexibility to choose their preferred carrier.

We will also be available to assist with any questions you might have. Our Account Management team will be in direct contact with each participant impacted over the coming weeks.

Decommission Date - January 31, 2018
